

Harness the power of unified communications

Accession UC

Unified Communications as a Service

It's no longer enough to have a business communications system only for voice calls from a desk phone. Modern businesses need to communicate over multiple channels – voice, video, email and messaging. And they need them to be integrated and accessible anytime and from any device – desktop PC, laptop or smartphone. That's a tall order, but one that's made easy with our cloud-based Unified Communications as a Service (UCaaS) solution. We take care of the details for you.

- No upfront costs for hardware and software
- No extra cost for upgrades or enhancements
- Scales with your company as it grows
- Predictable subscription-based pricing

Empower Your Always-On Workforce

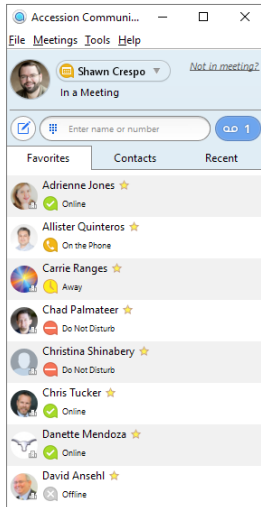

- + Unify Your Communications**
Integrate voice, video, presence, instant messaging and email into a single platform with Accession Communicator for desktop or mobile devices. (Read more on next page.)
- + Enable Employees Wherever They Are**
Supporting a distributed workforce is easy with our cloud-based platform. Employees can connect wherever they are with any Internet-enabled device.
- + Bring Your Own Devices**
With our service, your employees can use their own their desktop PCs, smartphones, tablets, laptops or other mobile devices to access our cloud-based solution.
- + Get Uninterrupted Access**
Access all the capabilities of our UCaaS platform anywhere, anytime. In the event of a power outage or natural disaster, calls can be forwarded to any phone.
- + Extend the Office Phone**
Twin your office phone features like dialing plans, outgoing caller ID and ACD hunt groups on smartphones, tablets, laptops or other mobile devices.
- + Manage Your UC Experience**
Easily manage business telephony features, call routing, contacts, messages, user profiles and more with our intuitive UC interface.

Accession UC

Anywhere, Anytime, Any Device

Access powerful communications features whether you're working from the office, home or on the road. Accession Communicator is a user-downloadable application that extends UC capabilities to desktop PCs, laptops, tablets or smartphones. It's the ideal solution if you have remote and mobile workers – especially those that bring their own devices.

Accession Communicator
Desktop Software

Accession Communicator
Mobile Application

ACCESSION COMMUNICATOR SUPPORTS:

- + Calling features, dial plans and outgoing caller ID available on users' office phones
- + Wi-Fi, 3G/4G or wired connections
- + Access to the corporate contacts directory
- + Instant messaging (IM) and presence
- + Click to call, chat or conference
- + Point-to-point video for video-enabled devices
- + Windows, MacOS, iOS and Android operating systems
- + SILK audio codec for high-quality voice

INSTANTLY IMPROVE PRODUCTIVITY WITH THESE UC FEATURES:

Control Incoming Calls

Set home of office call presence and preferences from wherever you are to guarantee important calls reach you and others go to voice mail.

Seamless In-Call Transfer

Using Accession Communications, users can transfer active calls from mobile to desktop without interrupting the call.

Unify Messaging

Get a single interface for wireline and wireless messages, with alert to new messages on any line.

Visual Voice Mail

With an optional speech-to-text transcription service, users can not only listen to voice mail, they can read it, too.

Centralize Contacts

Accession Communicator integrates contacts from various sources like email or .csv files, so users can find them all in one place.

Business SMS

Easily send and receive 1:1 text messages between business Direct Inward Dial (DID) phone numbers and SMS-enabled devices with this optional feature.

Synchronized Instant Messaging

1:1 and group instant messages (and SMS if enabled) are synced between desktop and mobile clients.

Access Web & Video Conferencing

Access optional Accession Meeting for video and web collaboration either scheduled or uplifted from an Accession call or IM in progress.
